

ABSTRACT OF THE DISCLOSURE

Equipment includes bony anchoring members one or two linking rods to be connected to the anchoring members and be attached to the vertebrae by dint thereof, parts for connecting the linking rod(s) to the anchoring members, and clamping elements for locking the linking rod(s) in the connecting parts; at least one anchoring member includes one proximal stud articulated with respect to a body for gripping a vertebra. The proximal stud exhibits an articulation head in the form of a spherical cap; and the anchoring member body includes a cavity for accommodating the articulation head and a wall surrounding this cavity, this wall being crimped around the articulation head and shaped to provide a proximal form, at least partially hemispherical.
